1 What it is

Climb is a Pomodoro focus app my team built at Hacklahoma 2026. It rewards focused work sessions and adds a penalty when you spend time in distracting apps. We built it with Expo, React Native and TypeScript, and I built both the backend and the frontend. The photo is from the demo, with the app running on a phone and the code on the laptop.

Status: built and demoed at Hacklahoma 2026. The code is on GitHub.
